

RESCUE FROM VEHICLE IN WATER INSTRUCTOR

Who Should Attend?

Emergency Services, other responders involved in the delivery of training for those engaged in rescues from vehicles in water.

Course/Programme requirements

Owing to the nature of the training, students must be fit for full operational duties in accordance with your organisation's requirements for this role.

Students should include appropriate all-weather outdoor clothing and footwear. All specialist equipment and PPE is provided.

To successfully complete this course students must have previously completed a course with content suitable to meet:

- DEFRA Module 3 Water Technician Instructor

Aim

To provide the knowledge and skills to manage training involving rescue simulations from vehicles in swift water.

Outcomes

After successful completion of the course, the student will have a firm foundation of knowledge and should be able to:

- Manage risks and organise facilities in artificial swift-water venues
- Install vehicles in different orientations
- Manage training in vehicle rope stabilisation
- Manage learning associated with vehicle behaviour in water
- Manage learning in relation to casualty issues associated with vehicle rescues
- Manage wade rescues including use of hand-held sleds
- Manage swim-based rescue simulations
- Manage craft-based "buoyant" rescue simulations
- Manage scenario-based training with multiple casualties from vehicles

Delivery Method

Training is delivered via lectures and practical sessions at a suitable venue with access to a vehicle.

Assessment/Certification/Accreditation

Core Course content is assessed through practical assessment throughout the course. Results centrally recorded.

Venue

This course can be run at venues that have access to vehicles in variable water flow, usually this will be Cardiff or Glasgow.

Duration and Programme Times

Two days 0900-1700 both days
