TEAM PERFORMANCE & RESCUE PLAN AUDITS

Goal:

To assess and enhance team readiness, rescue plans, and compliance by simulating workplace emergencies.

Target group:

Organisations aiming to test and improve their emergency response and rescue capabilities.

Highlights:

- Tailored emergency response scenarios for diverse workplace environments.
- Detailed debriefing to identify strengths and gaps in procedures and training.
- Option to conduct audits on-site or at an Outreach Rescue training facility.

Team Performance & Rescue Plan Audits

Period of validity

1 year

Certification

Attendance and performance feedback provided; certification optional based on client needs.

Venue

Any Outreach Rescue training facility or client-specified venues, subject to suitability.

Medic Skills

TBD

Description

Team Performance and Rescue Plan Audits are bespoke training exercises designed to meet your specific needs, and to test and improve your team's emergency response capabilities. Each assessment replicates realistic emergencies tailored to your specific operational environment in work at height, confined space or water related. Scenarios may incorporate casualty rescue and recovery as needed.

Following each exercise, a detailed debrief identifies strengths, deficiencies, and actionable improvements in your team's procedures, equipment, and training. Delivered at our training centre or your chosen location (subject to site suitability), these audits ensure your team is prepared for workplace emergencies.

Compliance:

Aligns with relevant workplace legislation and guidance applicable to the client's operations.

Previous knowledge:

No specific knowledge is required, though participants being familiar with existing rescue plans and procedures is beneficial.

Requirements:

Venues must meet safety and suitability standards for realistic scenario execution.

Progression:

Annual audits or advanced training to address identified gaps.

Theoretical elements:

– Emergency response planning principles.
– Review of current procedures and rescue plans.
– Compliance with workplace safety legislation.

Practical elements:

– Realistic emergency response simulations in your chosen environment.
– Assessment of team communication, equipment usage, and procedural execution.
– Comprehensive post-scenario debrief and actionable feedback.
